Summary

Software developer focused on backend and full-stack development using **Node.js**, **TypeScript**, **Next.js**, **PostgreSQL**, and **Redis**. Builds real-time, database-backed systems with measurable performance gains, and integrates AI/ML into production workflows.

Technical Skills

- **Languages**: Java, TypeScript, JavaScript, Python
- **Backend**: Node.js, Express.js, REST APIs, Socket.IO, WebSockets
- **Frontend**: React, Next.js, HTML, CSS, Tailwind CSS
- **Databases**: SQL, PostgreSQL, MongoDB, MySQL, Prisma ORM, Redis
- **AI/ML**: Sentence-Transformers, Embeddings, Cosine Similarity, Gemini API
- **Core & Coursework**: Data Structures and Algorithms, System Design, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks
- **Tools**: Git, GitHub, Supabase, Vercel, Render, Railway

Projects

DeSocial – Full-Stack Social Platform to Reduce Doomscrolling – *May 2026 – Present* GitHub

- Architected a full-stack social platform on **Next.js, Express.js, PostgreSQL, Prisma, and Redis**, prioritizing meaningful interaction over passive content consumption, with JWT access/refresh authentication, rate-limited auth endpoints, friend requests, and cursor-based feed pagination.
- Implemented a real-time chat system using **Socket.IO**, supporting message delivery, read status, conversation read tracking, room management, and reconnect handling.
- Reduced locally measured API response time from **90 ms to 18 ms (an 80% reduction)** by integrating Redis caching with configurable TTL-based expiration, and architected an asynchronous Redis-backed notification pipeline to decouple background processing from API requests.

Knight – Real-Time Multiplayer Chess Platform – *Feb 2026 – Mar 2026* GitHub | Live Demo

- Engineered a real-time multiplayer chess platform on **Next.js, Node.js, Socket.IO, PostgreSQL, and Prisma** with room-based state synchronization and server-side move validation, closing off client-side move tampering.
- Enabled queue-based matchmaking, reconnect handling, live chat, friend management, and draw/rematch workflows over WebSockets, alongside JWT authentication, guest login, and Google OAuth.
- Integrated a self-managed Stockfish engine through the UCI protocol, shipping a publicly playable production app that supports live matches end-to-end.

Recruitizer – AI Recruitment Platform – *Dec 2025 – Jan 2026* GitHub | Live Demo

- Delivered an AI recruitment platform on **Next.js, Express.js, MongoDB, and FastAPI**, supporting recruiter and candidate workflows from job posting through interview evaluation.
- Designed an embedding-based recommendation engine using **Sentence-Transformers and cosine similarity** to rank jobs against parsed resumes, with PDF and DOCX upload support.
- Integrated Gemini-powered interview generation and Auth0 + JWT authentication, delivering a complete assignment-to-evaluation workflow solo-designed across frontend, backend, and ML microservice.

Experience

Navadrishti – *Mar 2026 – May 2026 Software Development Contributor*

- Engineered an OTP-based authentication system using **Brevo, Supabase Auth, and PostgreSQL**, including retry handling and verification-expiry logic to cut failed logins.
- Built REST APIs and reusable Next.js components enabling communication between the frontend and AI/ML microservices.
- Collaborated directly with the founding team on frontend and backend features through GitHub-based code review.

Education

Galgotias College of Engineering and Technology – *2023 – 2027 (Expected)*
Bachelor of Technology in Artificial Intelligence and Machine Learning, CGPA: 8.07

Achievements

- Solved **700+** problems on LeetCode with a contest rating of **1970+** (Knight); ranked in the **Top 3%** globally.
